Samambu: a forest made of light

A landscape of light that evokes the essential beauty of nature, reminiscent of the secluded and immersive quietude of a bamboo grove. Neri & Hu reinterpret this atmosphere with *Samambu*, **a lighting system inspired by the natural elegance of bamboo canes**.

Samambu reinterprets an **archetype of Eastern tradition**, translating it into an **essential gesture of light**. Slender metal stems soar through space with natural lightness and follow a **visual rhythm that recalls the unconstrained growth of bamboo**. At the top, an opal glass diffuser houses a source that scatters a soft, uniform light in an enveloping glow.

The *Samambu* lamp is available in **two variants**. In the table version, a single base accommodates two stems of different heights, giving life to a dual beam of light. In the floor version, three elements stand side-by-side on the same base, extending vertically to compose a more sculptural and dynamic figure, like a small forest where each element exists in relation to the others, creating a **natural choreography of light and matter**.

To enhance the aesthetic of this refined system, Cassina offers the structure in **two finishes that evoke nature's intense, earthy tones**: *Chocolate* brown and *Brick* orange.
