A tiny, wonderful table galaxy

Bedin is an aluminum lamp with rechargeable batteries that upturns the classic proportions of these products, giving volume to the support base and reducing the lighting part, using pioneering technological solutions. The head, just five centimeters in diameter, houses a crown of LED lights, with brightness and color temperature control. The operation is particularly intuitive: simply press the head to switch on and turn it to control the settings. Bedin comes in three versatile anodized finishes that blend harmoniously into a variety of settings and contexts.

BEDIN LED LAMP
DESIGN BY ALESSANDRO STABILE,
2025

DEDICATED TO

Young metropolitans, interested in a quality lamp to use at home or in the office, also makes an ideal gift. The catering market, thanks to its size and proportions and the range of colors, the possibility to control the light source and the technology that memorizes the selected brightness when switched off.

Alessandro Stabile

BIO

Designer and art director, Alessandro Stabile set up his studio in Milan in 2011. His work as an industrial designer seeks a new balance between technical, typological and formal innovation, with designs that question our certainties, interpreting everyday opportunities to create furnishings and products with effortless elegance. His drive for technological innovation simplifies interaction, working on what shapes communicate. An advocate of circular design, Stabile sees design as the synthesis of respect for the environment, processes and the people who produce and use the product. He works for prestigious international brands; he has received several awards, including Archiproducts, the Red Dot, the IF Design Award and has been nominated several times for the Compasso d'Oro.

QUOTE

“The name of the lamp comes from a recently discovered tiny galaxy, considered to be a fossil from the beginnings of the universe. I like to think of the LED crown as a tiny, wonderful dwarf galaxy, for a new aesthetic that is ideal on a table set for lunch or a contemporary desk.” Alessandro Stabile

Rechargeable LED lamp

RECHARGEABLE LED LAMP

Rechargeable LED lamp in anodized aluminum with non-slip silicone base. Charging base with built-in USB-C cable. Available in gray, brown and fluorescent yellow.

TABLE LAMP IN ANODIZED ALUMINIUM. RECHARGEABLE BATTERY WITH USB-C CABLE. LED LIGHT 2W 5V.

DESIGN NOTES

Solid elegance

The 100% aluminum body offers a sensation of strength and quality, while the anodized finish enhances its essential and sophisticated lines.

Versatile

The lamp is suited for use both at home and in the office, as well as in public spaces, for spot and ambient lighting or as a furnishing element, with a wide brightness control spectrum and rechargeable battery.

SUSTAINABILITY AND SAFETY

EFFICIENT

With its efficient LED technology, the maximum power of the lamp is just 2W, for ultra-low consumption and a long battery life.

STABLE

The integrated silicone plate on the bottom of the stem ensures excellent stability while protecting the table surface.

USE AND MAINTENANCE

INTUITIVE

The battery inserted in the lower bell lasts for up to 30 hours. It charges on a special base with a built-in USB-C plug. The charging procedure, which takes around 4.5 hours, is shown by a small LED spot on the base of the lamp.

DIMMABLE AND CONTROLLABLE LED

The light source is a crown of dimmable LED lights with controllable color temperature: warm (2200K), natural (2600K) and cold (3000K). The lamp is switched on and off, and the color temperature and brightness controlled by a single switch integrated into the top disc.

MEMORY

Light memory technology that maintains the LED settings when the lamp is switched off. This is particularly useful in settings where many lamps are used at the same time (such as in restaurants).

RECHARGEABLE

The battery inserted in the stem lasts for up to 40 hours. It is charged on a special base with a built-in USB-C plug. The charging procedure, which takes around 4.5 hours, is shown by a small LED spot on the base of the lamp.

PACKAGING

Like the other new features, the Bedin lamp comes in a new packaging in recycled cardboard, the result of the recent rebranding operation. The packaging design follows an in-depth philological study of Alessi's historical packagings. The buff background color, a tribute to the wrapping paper used to sell the company's first trays and baskets, is decorated with a silver polka dot pattern that winks an eye at the graphics designed by Ettore Sottsass in the '80s for the Officina Alessi catalog product packaging. The label, with black writing on a matt silver background, recalls stainless steel, one of the key materials used in Alessi's production. The main product information is given in a title block, paying homage to Alessi's metal engineering and industrial drawing roots.
